

Asset Management System

NO.	วันที่เข้า	ชื่อสินทรัพย์	สถานที่	หมายเลข	ชื่อสินทรัพย์	จำนวน	สถานะ
1	04 March	Lorem ipsum dolor	11:00:0	ABC01234	Lorem ipsum dolor sit	1 ชิ้น	ปกติ
2	04 March	Lorem ipsum dolor	11:00:0	ABC01234	Lorem ipsum dolor sit	1 ชิ้น	ปกติ

Gfin Asset Management System (Gfin AMS) aims to enhance the asset management efficiency by reduce the difficulty in managing assets and cost. The program also helps in process improvement starting from incoming assets, maintenance, contract management and assets information (Type, Location, Problem, Provider, etc.) which can work together with Gfin PSIM for more intelligent management.

Product Highlight:

- **User Privilege Management**
 - Login via username and password.
 - Remember username and password.
 - Regenerate password through email for forgot password.
 - Multi-User Operating.
 - User privilege to access each function can be managed by user group.
 - Centralize user management from the central.
- **Data Management**
 - **Incoming Asset**
 - Registration Process include asset information such as; Serial Number, Purchasing Date, Name, Warranty Date, Document, Contract information.
 - Allow users to view asset information such as Receiving Date, Related Document, Name, Quantity, and etc.
 - Allow users to search to preview the information of asset.
 - Allow users to add, edit, or delete asset information.

- **Asset Maintenance**
 - Manual or Automatic notify confederate and administrator when maintenance is required via E-mail.
 - Provide maintenance information (Problem Date, Problem Detail) in pdf format then attached to E-mail.
 - Provide search feature for tracking maintenance process and detail.
 - Provide logs of all maintenance process as well as editor.
 - Allow users to manage E-mail receiver.
 - Allow users to add, edit, or delete maintenance detail.
- **Contract Management**
 - Support maintenance contract renewal function.
 - Provide maintenance contract information (Renewal Date, Expiry Date).
 - Provide search feature for contract status and detail by renewal date, expiry date, contract number, mix condition.
 - Provide logs of all maintenance process as well as editor.
 - Allow users to add, edit, or delete contract detail.
- **Categorization**
 - Allow users to add, edit, or delete asset categories and detail.
- **Assets Monitoring**
 - Centrally monitors and logs the status of all security devices included: video loss of any analog camera, connection loss of any Network IP device, harddisk failure of DVR and NVR and microSDXCTM card 64GB up to 128GB.
 - System can check read / write status of microSDXCTM of IP Camera.
 - System can scan the abnormal event of CCTV such as tampering, no picture, out of focus, camera blocked both manually and scheduling.
 - Real time monitoring server work rate, performance and availability.
 - Customization event monitoring such as; Blue screen, OS crash, Abnormal Shutdown, Kernel Power Error, Virtual memory not enough.
 - Monitor important program running status and alert for prohibited program.

- **Alarm Management**
 - Schedule and automatic handle alarm to Matrix Profile, control output, send alarm to GIS Map, E-mail, SMS, Camera Preset, popup message, send map 2D or 3D alarm to monitor and popup live camera and define alarm priority colors.
- **Reporting**
 - Report all asset information including maintenance process, status, problem, name, location in text and graphical form.
 - Provide calendar view to summarize event on each day.
 - Provide customize dashboard for real-time update for any type of system event or data such as camera availability, temperature update, number of people in the area, any abnormally event, or etc. with customized color for each type of information.
 - Provide customize statistical data such as maintenance frequency, lost frequency, and etc.
 - Support report exporting in .doc, .csv, .xls, .pdf or etc. format.
 - Report Interval: Daily, Weekly, Monthly, etc.
